Loading Dock Procedures

Overview
The loading dock operates from 06:00 to 22:00 on weekdays. All trailers must check in with the dock coordinator before backing into an assigned bay.

Dock Assignment
The dock coordinator assigns each trailer to a numbered bay based on the delivery schedule. Drivers must not select their own bay without coordinator approval.

Trailer Securing
Wheel chocks and a dock lock must be engaged before the dock plate is lowered. The dock light must show red until securing is confirmed, then green once loading may begin.

Housekeeping
Pallets, stretch wrap, and strapping debris must be cleared from the dock apron between trailers to keep the walkway clear for forklift traffic.
